DATA SUMMARY SHEET

COUNTRY AND DATE OF STUDY: Canada, 1973

NAME OF STUDY (full codebook title and principal investigator):

1973 Canadian Mobility Study PI's: Monica Boyd, John Goyder, Frank Jones,
Hugh McRoberts, Peter Pineo, and John Porter.

SAMPLE DESCRIPTION (e.g., date, size, weighting, kind of sample, male/female ratio, households, idiosyncratic features of sample):

(from documentation accompanying tape): Multi-stage stratified cluster sample was designed to represent the non-institutional adult canadian opoulation. File contains data for 21,751 males (data copying resulted in loss of 1 male, so N of men=21,750), and the number of females = 23,116. Total sample size equals 44867 (actually 44866 since lost one case copying file). For weighting, use the final universal weight (VAR100) to represent the population, not the labour force weight (VAR020) (this one is inappropriate for the mobility study population.

PUBLICATIONS BASED ON DATA SET:

REMARKS: (Problems, peculiarities of data):

In the processing of copying over the tape (the data originally came on 2 tapes), one case was lost (a male). Thus the final N of the data equals 44866.

A second file was received along with the raw data, which provided on tape all the SPSS cards needed to create an SPSS file of the raw data. Since I could not fit this file on one tape along with the data (due to blocksize limitations of the NAS computer), I had this information keypunched. Two tapes sent from Canada (one was one we had sent them, the other was sent back to them when the copying was complete).

Additional information accompanying tape (letter, computer output) were filed in the correspondence file.

DATA LOG

COUNTRY: CANADA, 1973

STUDY: Canadian Mobility Study.

Initial Contact: Don made initial contacts regarding the 1973 Canadian Mobility Survey through Monica Boyd. Data was finally obtained from Bonnie Shiell, Acting Data Archivist, Carleton University, Ottawa, Canada K1S 5B6 (see correspondence file for exchange of letters).

Occupation Code: The occupation code used is the Blisshen 2-digit code, a 2-digit grouped occupation code, the 2-digit 1961 occupational classification, and a 2-digit 1971 occupational classification.

June, 1979

Tapes arrived at the Academy, along with documentation (filed in correspondence file). Two tapes arrived:

tape 1: contained most of raw data (LRECL=135)

tape 2: contained remainder of raw data and as file 2 contained a list of SPSS cards used to make SPSS file

A dump of the SPSS cards were made and is included in as Run 1 in Data Preparation binder.

I copied the data from the two tapes onto one by blocking the data at 7400. The SPSS data would not fit on the tape, so I had these keypunched directly onto cards. Copied the raw data to a backup to make sure the correct number of records had been copied. Everything looked okay. See Run 2 in data preparation binder (there was no output from copying the two files onto one tape since programmer did that for me).

September, 3, 1979

After having the SPSS cards keypunched, I ran a program through to test it out. The SPSS program gave me an error which said that after reading 44866 cases (I read the data in its entirety and not as separate male and female subfiles), I decided that one case had been lost in the copying, and thus changed the N OF CASES card to read 44866. With that change, the program worked (see Run 3). I reran the program to get marginals on all the variables in the file and a dump of file information included with the SPSS program (ie. missing values which we may want to delete before doing runs) (see Run 4 for marginals on all variables).

Given that this SPSS deck was already included, we will probably want to assign prestige scores through SPSS rather than the Witzke program. This will be determined when we want to access the data for analysis.
